EMPOWERING TEACHERS AND PRACTITIONERS

Introduction

An empowered system expects, and creates, the conditions for all to work within a culture of collaboration and collegiality with learners, parents, colleagues and multi-agency partners. All share a vision for education based on the values and needs of the community.

The culture should foster feelings of trust, openness, well-being and satisfaction for all, enabling teachers, practitioners and learners to be the best they can be. In this culture, the needs of all learners are understood, their voices are heard and included. Teachers and practitioners work in a culture and ethos of collaboration where learning experiences are co-created and the curriculum is right for the context and every learner.

‘The culture and ethos of our school is positive and focused on the needs of all staff, partners and learners. We actively promote equalities for all, so staff feel confident in the workplace. Our staff feel empowered and motivated to take decisions and lead aspects of school improvement.’

Quality Indicator 1.4 How Good Is Our School 4, Education Scotland, 2015

To enable this, the culture should be underpinned by a strong commitment to developing capacity through professional learning. Teachers and practitioners should have the time and space to engage in high quality professional learning, which can take many different forms. This can include learning with colleagues, the use of research, enquiry and reflective-based approaches that are relevant, authentic and ongoing. Teachers and practitioners benefit from engaging with networks and learning communities who are developing professional practice together throughout their career.

‘Across our school, an ethos of professional engagement and collegiate working is evident. This leads to continuous improvement in learning and teaching and improved outcomes for our learners. There is evidence of strong leadership of learning by staff at all levels and in a range of contexts. We build and maintain constructive relationships, within our setting and beyond, which foster collective responsibility and mutual support. All staff undertake lead roles to motivate, support and inspire others.’

Quality Indicator 1.2 How Good Is Our School 4, Education Scotland, 2015

All teachers and practitioners are enabled to engage fully with the complexities of education and to be key actors in shaping educational change, contributing to the enhanced reputation of their professions. It is the role of all teachers and practitioners to help shape an empowered system where teachers and practitioners, individually and collaboratively, can be adaptive and creative in implementing approaches to learning and teaching that improve outcomes for all in the learning community.
Principles

The six dimensions of empowerment (identified in Education Scotland thematic reviews) are identified as important levers for change. These dimensions can apply at different levels of the education system to ensure that decisions about children’s and young people’s learning and school life are made within schools, supported by parents and the local community.

Under the six dimensions a culture of empowerment enables teachers and practitioners to:

Autonomous
- have confidence and capacity to take steps that meet the needs of learners in innovative and creative ways;
- be professionally courageous and take measured risks to improve outcomes for children and young people; and
- exercise control over workload and have an effective voice in determining priorities based on what makes the most difference for learners in their context.

Professional Learning
- be leaders of learning within their context;
- engage directly with relevant professional standards and feel supported and challenged by the professional review and development process;
- be able to actively seek out and engage with a diverse range of professional learning opportunities and networks;
- be connected with literature, research and policy to lead and develop learning in their context; and
- engage in ongoing self-directed learning through adopting an enquiring stance in their practice to improve outcomes for their learners.

Participation and Engagement
- be involved in, and actively contribute to, evidence-based decision-making about the life and work of the school;
- engage with pupils, parents and partners in a range of ways to develop better outcomes for children and young people; and
- engage in positive and supportive workplace relationships that promote a sense of belonging.

Collaboration
- build and sustain positive relationships with colleagues and partners through collaborative practice in planning, leading and evaluating learning; and
foster a culture of collective responsibility and collaborative professionalism to improve outcomes for children and young people.

Resources

- have access to skills, information, guidance, tools and resources to bring about improvement;
- be afforded the time required to be an active participant in an empowered system; and
- ensure resources are available which overcome barriers to access and equity for all in the learning community.

Impact

- be mindful of the importance of well-being and contribute to the development of a healthy learning environment, including control over workload; and
- be evidence and data informed to demonstrate the impact of interventions and identify next steps.
