

Mathematics - its impact on the world past, present and future

Terms	Illustrations	Definition
Babylonian number system	 <p>The illustrations show four examples of Babylonian numerals: <ul style="list-style-type: none"> A single yellow wedge pointing downwards, labeled 'One'. A single yellow chevron pointing to the left, labeled 'Ten'. Five yellow wedges pointing downwards in a horizontal row, labeled 'Five'. One yellow chevron pointing to the left followed by two yellow wedges pointing downwards in a horizontal row, labeled 'Twelve'. </p>	<p>It used only two numerals or symbols, a one and a ten to represent numbers.</p> <p>The system got trickier with larger numbers and used a base 60 system, rather than our system of base 10.</p>
Binary system		<p>Only made up of only 0's and 1's. There is no 2,3,4,5,6,7,8 or 9.</p> <p>In a binary number each "place" represents a power of 2. E.g.</p> $1 = 2^0 = 1$ $10 = 2^1 = 2$ $100 = 2^2 = 4$ $1000 = 2^3 = 8$ $10000 = 2^4 = 16$ <p>Binary numbers are very useful in electronics and computer systems. Regardless of the type of information represented, it is all stored as bit patterns made up from the digits 1 or 0. In other words everything that is stored on the computer is eventually broken down into its simplest form, which is a pattern of 1s and 0s.</p>

Mathematics - its impact on the world past, present and future

<p>Decimal number system</p>		<p>The number system we use every day, based on 10 digits (0, 1, 2, 3, 4, 5, 6, 7, 8, 9). It can also be called 'base 10' system. The value of the digit depends on where it is placed in the number. This is called place value. Zero is used as a place holder which affects the value of the number e.g. 102 and 1002 – the 0 significantly changes the value of the number.</p>
<p>Egyptian number system</p>		<p>Written symbols and hieroglyphics. There was a symbol for every power of ten and the numbers were written from right to left.</p>

Mathematics - its impact on the world past, present and future

	 <p>Handwritten mathematical representations of numbers:</p> <ul style="list-style-type: none"> 100 = 9 200 = 99 300 = 999 400 = 9999 500 = 99999 100 = 8 (with a drawing of a 100) 1 = 2 = 3 = 4 = 10 = ∩ 20 = ∩∩ 30 = ∩∩∩ 40 = ∩∩∩∩ 	
<p><u>Famous mathematicians</u></p>		<p>People who have contributed significantly to society through the creative and intelligent use of mathematics. Famous mathematicians have played a huge part in shaping our world as it stands today.</p>
<p><u>Fibonacci Sequence</u></p>		<p>Found by adding the two numbers before it together.</p> <p>e.g. 0, 1, 1, 2, 3, 5, 8, 13, 21, 34...</p> <p>The 2 is found by adding the two numbers before it (1+1)</p> <p>The 5 is found by adding the two numbers before it (2+3)</p> <p>The 8 is found by adding the two numbers</p>

Mathematics - its impact on the world past, present and future

		<p>before it ((3+5)</p> <p>The 13 is found by adding the two numbers before it (8+5)</p> <p>The 21 is found by adding the two numbers before it (8+13)</p> <p>The next number in the sequence above would be 55 (21+34)</p> <p>There are many areas of nature where the Fibonacci sequence can be found and some of these areas include, flower petals, plants, fruit, the human face, the human hand and animals (i.e. rabbits)</p> <p>Leonardo Bonacci, known as Fibonacci, founded the sequence so it was named after him.</p>																																																						
<p>Greek number system</p>	 <table border="1" data-bbox="483 815 887 1369"> <tr> <td>1</td> <td>α</td> <td>10</td> <td>ι</td> <td>100</td> <td>ρ</td> </tr> <tr> <td>2</td> <td>β</td> <td>20</td> <td>κ</td> <td>200</td> <td>σ</td> </tr> <tr> <td>3</td> <td>γ</td> <td>30</td> <td>λ</td> <td>300</td> <td>τ</td> </tr> <tr> <td>4</td> <td>δ</td> <td>40</td> <td>μ</td> <td>400</td> <td>ν</td> </tr> <tr> <td>5</td> <td>ε</td> <td>50</td> <td>ν</td> <td>500</td> <td>ξ</td> </tr> <tr> <td>6</td> <td>ς</td> <td>60</td> <td>ς</td> <td>600</td> <td>χ</td> </tr> <tr> <td>7</td> <td>ζ</td> <td>70</td> <td>ο</td> <td>700</td> <td>ψ</td> </tr> <tr> <td>8</td> <td>η</td> <td>80</td> <td>π</td> <td>800</td> <td>ω</td> </tr> <tr> <td>9</td> <td>θ</td> <td>90</td> <td>Ϟ</td> <td>900</td> <td>λ</td> </tr> </table>	1	α	10	ι	100	ρ	2	β	20	κ	200	σ	3	γ	30	λ	300	τ	4	δ	40	μ	400	ν	5	ε	50	ν	500	ξ	6	ς	60	ς	600	χ	7	ζ	70	ο	700	ψ	8	η	80	π	800	ω	9	θ	90	Ϟ	900	λ	<p>Originally had 27 symbols. Our own word "alphabet" comes from the first two letters, or numbers of the Greek alphabet -- "alpha" and "beta." Greek letters were also used for writing Greek numerals. The first nine letters (from alpha to theta) were used for the numbers 1 to 9. The next nine letters (from iota to koppa) were used for multiples of 10 from 10 to 90. Finally, the next nine letters (from rho to sampi) were used for 100 to 900. For example, the numbers 1, 2, and 3 are alpha, beta, and gamma.</p>

Mathematics - its impact on the world past, present and future

Pythagoras' Theorem

In a right angled triangle, the square of the long side is equal to the sum of the squares of the other two sides. It is stated in this formula:

$$a^2 + b^2 = c^2$$

Pythagoras' Theorem was founded by Pythagoras of Samos, a Greek philosopher and mathematician.
